## Global: The Big Swing

Eskalasi tensi geopolitik AS - Iran membuat harga minyak Brent kembali naik. Kenaikan harga minyak dan *tone hawkish* The Fed membuat DXY bertahan tinggi dan *yield* UST naik. Namun, pasar saham AS justru *rebound* seiring Tiongkok menyetujui impor *chip* Nvidia H200 dan rilis AI Muse Spark dari META.

### Key Highlights:

- Oil Whipsaw.** De-eskalasi tensi geopolitik AS - Iran membuat akses Selat Hormuz kembali di buka sehingga harga minyak Brent turun ke USD 72,12/barel per 3 Juli 2026 dan telah kembali ke level sebelum perang. Namun, eskalasi tensi geopolitik AS - Iran kembali terjadi seiring Iran melakukan penyerangan terhadap kapal yang melewati Selat Hormuz dan AS menyatakan telah menyerang puluhan target militer Iran. Hal tersebut membuat harga minyak Brent kembali naik ke USD 78,71/barel secara *intraday* per 13 Juli 2026.
- Hawkish Hold.** Dalam sepekan per 10 Juli 2026, DXY bertahan tinggi di 100,95 dan *yield* UST naik di seluruh tenor. Pasalnya, rilis Fed *minutes* dari FOMC Juni 2026 menunjukkan mayoritas *tone* pejabat The Fed yang *hawkish* karena mempertimbangkan risiko kenaikan inflasi lebih tinggi dari risiko pelemahan ketenagakerjaan. Di tambah lagi, re-eskalasi perang AS - Iran membuat pasar masih berekspektasi The Fed dapat menaikkan suku bunga sebesar 25 bps di September 2026 dan 25 bps di Januari 2027 (**Exhibit 1**).
- AI Rotation.** Pasar saham AS menguat dengan S&P 500 +1,23% dan Nasdaq +1,74% dalam sepekan per 10 Juli 2026. Pasar saham AS sempat terkoreksi di tengah pekan akibat kekhawatiran *AI capex* dan eskalasi perang AS - Iran, namun kembali *rebound* seiring sentimen positif: 1) Pemerintah Tiongkok yang menyetujui impor *chip* Nvidia H200; 2) Strategi *AI monetization* & rilis AI Muse Spark META yang mendapat respon positif pasar. Di sisi lain, pasar saham Asia khususnya Korea Selatan dan Taiwan terkoreksi dalam sepekan per 10 Juli 2026 seiring kekhawatiran terkait *AI capex* dan sentimen *over leverage* investor. Pasar saham Tiongkok *rally* seiring rotasi investor dari pasar saham Asia lainnya ke Tiongkok yang beberapa waktu ini telah ditinggalkan dan sentimen positif dari Deep Seek yang berencana mengembangkan *chip* secara mandiri (**Exhibit 2**).

## Indonesia: Work In Progress

USD/IDR melemah seiring DXY yang bertahan tinggi dan *outflow* investor asing. *Yield* FR naik di seluruh tenor seiring pelemahan USD/IDR dan *tone hawkish* The Fed. Pasar saham Indonesia cenderung *sideways* seiring aktivitas investor yang belum menunjukkan sinyal positif.

### Key Highlights:

- 1. Reserve Buffer.** USD/IDR kembali menyentuh level 18.000 per 10 Juli 2026 seiring DXY yang bertahan tinggi dan *outflow* investor asing dari pasar saham Indonesia. Selain itu, terdapat komentar Fitch terkait cadangan devisa Indonesia yang terus menurun hingga hanya cukup untuk menutup pembayaran eksternal selama 4,90 bulan (*avg.* negara BBB: 5,00 bulan). Untungnya, cadangan devisa Juni 2026 telah naik ke USD 145,60 miliar (*prev.* USD 144,90 miliar) (**Exhibit 3**) akibat penerimaan pajak dan jasa di tengah pembayaran ULN pemerintah sehingga membuat rasio kecukupan tersebut naik ke 5,40 bulan.
- 2. Fiscal Anchor.** Kombinasi dari *tone hawkish* The Fed dan USD/IDR yang bertahan tinggi membuat ruang kenaikan suku bunga BI semakin terbuka. Alhasil, *yield* FR naik di seluruh tenor khususnya di tenor pendek. Kenaikan *yield* FR tenor menengah - panjang lebih terbatas seiring *demand* investor domestik yang solid dan berbagai upaya efisiensi APBN, seperti: 1) Pemangkasan anggaran MBG dari IDR 268,00 triliun ke IDR 228,00 triliun; 2) Implementasi B50 untuk mengurangi impor BBM. Per Juni 2026, defisit APBN mencapai 0,76% PDB (Target FY2026: 2,85% PDB). Kenaikan *yield* FR dan komitmen pemerintah menjaga defisit fiskal membuat *net foreign flow* beralih dari *outflow* menjadi *inflow* sebesar IDR 8,50 triliun secara YTD 8 Juli 2026. Sebagai informasi, pada 13 Juli 2026, S&P Global masih mempertahankan *credit rating* Indonesia di BBB dengan *outlook stable*.
- 3. Absence of Catalyst.** IHSG cenderung *sideways* di 5.924 dalam sepekan per 10 Juli 2026. Sentimen negatif datang dari pernyataan S&P DJI yang memasukkan pasar saham Indonesia ke *list* potensi *downgrade* ke *frontier market*. Alhasil, aktivitas investor baik asing dan domestik belum menunjukkan sinyal positif sehingga volatilitas masih berpotensi terjadi. Aktivitas investor yang pasif terlihat dari volume transaksi harian yang hanya mencapai IDR 7,51 triliun per 10 Juli 2026 (*avg.* 5YR: IDR 12,42 triliun) (**Exhibit 4**). Secara YTD 10 Juli 2026, investor asing mencatatkan *outflow* sebesar IDR 79,29 triliun dari pasar saham Indonesia.
